Former finance professional turned developer. Experienced in front end development and working towards fullstack proficiency.

SKILLS

JAVASCRIPT REACT SVELTE HTML CSS WEBPACK NPM GIT

PROJECTS

Shopping Cart - [Repo](#) - [Live Link](#)

React, JavaScript, Styled Components, HTML, CSS

A responsive shopping cart project built using React's functional components. I utilised the useReducer and useContext hooks to create a simple global state management system (akin to Redux) and built a custom hook to fetch product data from an API using promises. I styled the project using styled-components.

Cards Against Cowmanity - [Repo](#) - [Live Link](#)

React, JavaScript, HTML, CSS

A memory card game built using React functional components. I leveraged the useState hook to manage application state and control component rendering. I also employed the useEffect hook to manage component lifecycle.

TaskTemple - [Repo](#) - [Live Link](#)

JavaScript, HTML, CSS, Webpack

An advanced ToDo list app built using plain JavaScript. I rolled this package myself using Webpack, and made heavy use of ES6 modules and factory functions to manage application objects.
